

Hospital has new 32 Slice CT Scanner

The Big Horn Hospital Association is proud to announce that a new Toshiba Aquilion 32 slice CT scanner is now in operation and available to provide enhanced imaging and patient comfort. Pictured are left, Jennifer Chavez, RTM and Cadie Warren, RT.

By virtue of its enhanced diagnostic capability, patients can avoid invasive medical procedures for increased comfort during their treatment. Additionally, Big Horn Hospital is always concerned with radiation dose; this CT system is equipped with reduction features that have been designed to deliver the best image quality at the lowest possible dose.

The speed and clinical accuracy of this technology offers significant benefits to patients-especially trauma, pediatric and critically ill patients-by enabling physicians to more clearly visualize internal injuries and disease with faster and easier studies. The ability to scan enhances cardiac capabilities as well as peripheral studies.
